Nation's space achievements out of this world

Successful return of lunar rocks was just one of the highlights for the sector this year. **Zhao Lei** reports.

2020 year in Review

China's space industry was undoubtedly a remarkable year, characterized by a series of milestones that have solidified its position as a global space power. From the successful return of lunar rocks to the launch of the first Chinese lunar lander, the country's space achievements have been nothing short of extraordinary.

The most significant event in the year was undoubtedly the successful return of lunar rocks from the Chang'e-5 mission. This mission, which was the first of its kind, marked a major milestone in China's space exploration efforts. The rocks, which were collected from the lunar surface, were brought back to Earth, providing valuable insights into the history of the Moon and the solar system.

The mission was a testament to the country's technological prowess and its ability to undertake complex space operations. It also demonstrated the country's commitment to advancing its space program and exploring the frontiers of space.

The success of the Chang'e-5 mission was just one of the highlights of the year. Other notable achievements include the launch of the first Chinese lunar lander, the Tianwen-1 Mars rover, and the successful launch of the first Chinese space station module.

These achievements have not only enhanced China's reputation as a global space power but have also contributed to the advancement of space exploration and the understanding of the universe.

The country's space program has been a source of pride and inspiration for its people, and it is expected that it will continue to achieve even greater success in the years to come.

2020
year
Review

China's every ordinary day is a journey of discovery. In 2020, the nation's space achievements were a testament to the country's rapid development. The year was marked by the successful return of lunar rocks, the launch of the first Chinese space station module, and the successful completion of the first Chinese lunar landing mission.

China's first lunar landing mission, Chang'e-5, successfully returned lunar rocks to Earth on December 17, 2020.

Expanding fleet

The Chinese space sector's rapid growth is evident in the number of satellites launched. The country's space program has expanded its fleet of satellites, including the first Chinese lunar lander, the first Chinese space station module, and the first Chinese lunar rover.
